Monetization and Live Ops

Monetization designer, live-ops producer

`scenario-roblox-monetization`

Builds Roblox shops, receipts, passes, odds disclosures, analytics and live config so every purchase grants exactly once after a save and every live change is decided by data.

Live capture, Studio 0.743: odds disclosed before spend (left); restricted player sees a direct-price offer, no egg (right).

USE IT WHEN

- Players say they bought it but did not get it, or got it twice
- A shop, game passes, subscriptions or an egg with odds before launch
- Planning analytics funnels, live config, A/B experiments, thumbnails or a launch plan

WHAT THE EXPERTS INSIST ON

- Grant only in the receipt handler, after the save holds the PurchaseId; prompt-finished events are not proof of payment.
  Creator Docs; Stewiepfing (educator)
- One odds table feeds the roll and the disclosure; check ArePaidRandomItemsRestricted per player before offering a paid egg.
  Creator Docs (paid random items)
- Monetize every intended mechanic at launch, cheaply: starter bundles at 25 to 99 Robux; never gate basics like movement.
  Roblox monetization leads and studio heads (RDC 2025)
- Ship risky changes behind a config; check the minimum detectable effect first; guardrails like disconnects outrank a modest gain.
  Roblox experiments team and studios (RDC 2025)
- Play-through rate and first-play bounce replaced QPTR; ranking learns only from organic Home traffic; thumbnails must show the real game.
  Roblox discovery leads (RDC 2026)

WORKFLOW, WITH THE GATE BEFORE EACH NEXT STAGE

1. **Audit purchase paths.** **Gate:** Zero errors, and the Studio tally equals the offline Lune tally.
2. **Catalog and receipts.** **Gate:** A duplicate PurchaseId grants once; a failed save answers NotProcessedYet.
3. **Perks and prices.** **Gate:** Paid state survives a failed check; every displayed price comes from the engine.
4. **Paid random items.** **Gate:** Displayed odds sum to 100%; restricted players cannot reach the prompt.
5. **Analytics and live config.** **Gate:** Invalid funnel steps dropped; defaults apply when ConfigService fails.
6. **Store art.** **Gate:** check_art reports zero errors; the owner uploads.
7. **Launch and live ops.** **Gate:** Each experiment has a primary metric, guardrails, an MDE and a stop date.

KEY NUMBERS

Starter bundle price	**25 to 99 Robux (RDC 2025)**
Price optimization eligibility	**60,000 transactions in 30 days**
Experiment length and arms	**14 to 60 days, up to 2 variants**
Early harm stop, first 24 hours	**-10% playtime, or -20% ARPU or payer conversion, 10,000+ enrolled**
Audience for a useful experiment	**about 1,000 daily active users**
Thumbnail and experience icon	**1920x1080 under 3 MB; icon 512x512, legible at 150x150**

CHECKS THE AGENT RUNS ON ITS OWN WORK

- Offline and Studio audits: zero errors, warnings fixed or justified, same tally in both.
- Synthetic receipts in a playtest: a duplicate grants once; a failed save retries and grants once.
- Every suite passes in Lune and, unchanged, in Studio with the same count.
- Shop, odds panel and restricted view captured and checked; store art read on a contact sheet.

HANDOFFS

Receives Receipts handler and profile persistence from data; validated remotes and the purchase-signal finding from networking.

Delivers Product ids and grant amounts to data; price and odds text and perk attributes to UI; telemetry rates to performance.

TOOLKIT `RBX_MONETIZATION.PY`

- `audit_place()`: offline Lune audit of purchase paths and price literals
- `check_art()`: size, format and layout checks before the owner uploads
- `mde()`: smallest lift an experiment can detect at that enrollment
