ROBLOX STUDIO EXPERT SKILLS · TEAM SKILL 6 OF 14

Tooling and build pipeline

Build engineer, tools programmer

`scenario-roblox-tooling`

Sets up a Roblox team repository that rebuilds every place from files, gates every pull request with types, lint and tests, and publishes only through CI.

Agent prompt verifying Script Sync with GetStatus. Roblox Learn, Start coding with AI via MCP, 03:15.

USE IT WHEN

- Setting up Rojo or Script Sync, Wally, Lune tests and CI for a team
- Running engine tests in CI and publishing every place from GitHub
- Rojo deleted parts, Script Sync stopped, or a release wiped the map

WHAT THE EXPERTS INSIST ON

- Only the pipeline publishes, all places in one run, built from the repository; a hand-edited dev place ships deletions silently. CJ_Oyer (Connect 2023 speaker)
- One sync tool per folder: Script Sync for code-only Studio teams, Rojo for whole-project builds with Wally and CI. Distracted Games (Roblox developer)
- Wally packages can arrive without an entry module: require the real entry, such as lib, or copy the module in. Distracted Games (Roblox developer)
- Verify by code before any commit: touch every synced folder, read InstanceFileSyncService:GetStatus, then playtest. Roblox Learn (official)
- Agents driving Studio stay on strict Luau: roblox-ts loses Studio editing, Luau line numbers and fast API typings. Adam (Last Level Studios)

WORKFLOW, WITH THE GATE BEFORE EACH NEXT STAGE

1. **Scaffold the repository.** **Gate:** lint reports no error, including properties Rojo drops silently
2. **Run the local gate.** **Gate:** every step exits 0; each planted fault turns exactly its step red
3. **Engine tests in Studio.** **Gate:** 0 failed and more than 0 run, in Edit and in a playtest
4. **Probe client script placement.** **Gate:** each client entry runs once per player
5. **Commit CI on pull requests.** **Gate:** first pull request green; a planted fault turns it red
6. **Release from the pipeline.** **Gate:** merge exits 0, base place fresh, Saved versions before any Published upload

KEY NUMBERS

Pinned toolchain, all installed and run	**Rojo 7.7.1, Wally 0.3.2, Lune 0.11.0, luau-lsp 1.70.1, Selene 0.32.0**
Local gate on the template	**1.9 s: old solver 1.2 s, new solver 0.7 s**
Engine tests in Edit	**0.07 s for 5 tests in Studio 0.743**
Luau Execution unfinished tasks per place	**10; the 11th create gets HTTP 429**
Luau Execution rate per key owner	**5 creates, 200 gets, 45 log reads per minute**
Unused Open Cloud API key	**expires after 60 days, even without an expiry date**

CHECKS THE AGENT RUNS ON ITS OWN WORK

- Gate report ok, plus one red run for each planted fault
- Lune and engine specs report N passed, 0 failed, with N above 0
- ShipCheck finds nothing on the ship build; the dev build flags only test code
- Both workflows pass check_workflow and actionlint; no secret inside a run line

HANDOFFS

Receives Folder layout and RunContext choices from architecture; Studio channels and the headless runner from the expert lead.

Delivers A repository that rebuilds every place, CI on pull requests, ShipCheck report and Saved version numbers to performance.

TOOLKIT `RBX_TOOLING.PY`

- `scaffold()`: copy the team template, TestRunner and ShipCheck
- `gate()`: run the CI steps locally, in order
- `merge_place()`: merge the builders' base place with the code build

MAIN EXPERT SOURCES

CJ_Oyer
Independent developer, three Roblox Accelerator internships, Connect 2023: Open Cloud workflows

Distracted Games
Roblox developer (unverified), Wally with Script Sync (2026)

Roblox Learn
Official Roblox channel, Start coding with AI via MCP (2026)

Adam (BanTech)
Director, Last Level Studios, Why we ditched Luau for TypeScript (2026)

STATUS

Tests 27 offline checks pass

In app 14 live tests pass in Roblox Studio 0.743
