UI and input

UI designer, UI programmer

`scenario-roblox-ui`

Builds one Roblox UI tree with StyleSheets and Input Action System contexts, then proves it on nine device presets with layout numbers, real clicks and keys.

Live capture, Studio 0.743: iPhone 14 preset, portrait and landscape, HUD and shop, 0 layout warnings.

Phone hot zones slide; its 36 px top bar now measures 58 px. Roblox mobile roundtable, 08:20.

USE IT WHEN

- Building a HUD, main menu, shop grid or settings screen
- UI scales wrong on phones, or buttons hide behind the jump button
- Gamepad navigation, input migration, themes, accessibility or localization

WHAT THE EXPERTS INSIST ON

- Panels take Scale capped by a UISizeConstraint; buttons and text take Offset so they stay legible on phones.
  Mobile roundtable (Roblox Learn)
- Never put a UIScale on the whole ScreenGui: it breaks everything.
  boatbomber (RDC 2024 panel)
- Read PreferredInput, not TouchEnabled: phones take controllers and laptops have touch screens. Roblox input team (Roblox Learn)
- Never encode state by color alone; avoid chords and F keys, and support both WASD and arrows.
  BitwiseAndrea (Roblox accessibility engineer)
- Keep the look in a StyleSheet: tokens for every repeated value, themes as sheets of identically named tokens. Roblox UI product team

WORKFLOW, WITH THE GATE BEFORE EACH NEXT STAGE

1. **Build in Edit.** **Gate:** two StyleLinks, no selector errors, both ScreenGuis direct children of StarterGui
2. **Audit the tree.** **Gate:** UIAudit 0 errors, 0 warnings; every rule fires on its fixture
3. **Layout matrix, nine presets.** **Gate:** 0 warnings per device and scene; abilities above the jump button
4. **Drive mouse, keys, gamepad.** **Gate:** each click changes only its attribute; the menu context sinks gameplay keys
5. **Themes and preferences.** **Gate:** both themes 0 low-contrast; opaque first frame under reduced motion
6. **Respawn and localization.** **Gate:** one HUD after respawn; no clipped text in German or +40%

KEY NUMBERS

Top bar inset on every preset	**58 px measured; the 2023 slide said 36**
Jump button on phones	**70 px at (1,-95, 1,-90)**
Menu context over gameplay context	**Priority 3000 with Sink over 2000**
Minimum touch target and text	**44 px targets, 11 px text**
Text contrast against its background	**4.5:1; 3:1 at 24 px and up**
Pseudo-localization test length	**+40% on every source string**

CHECKS THE AGENT RUNS ON ITS OWN WORK

- UIAudit and the lead's Audit.ui report 0 warnings and 0 errors
- UILayout.check reports 0 warnings on nine presets in two scenes
- No clipped text in German and pseudo-localization on the two smallest phones
- Contact sheets read: legible text, nothing under touch controls, rarity readable without color

HANDOFFS

Receives Coins and ownership attributes from data, ability cooldowns from gameplay, icons and frames from scenario-game-assets.

Delivers InputActions with Scriptable test bindings to gameplay; UI cost on low phones to performance; screen events to monetization.

TOOLKIT `RBX_UI.PY`

- `build()`: install kit, controller and shop, build HUD and menu
- `audit()`: run UIAudit's 20 rules and the lead's UI audit
- `layout_matrix()`: check and capture each scene on device presets

MAIN EXPERT SOURCES

Cindering and Nathan (Undone Builder)
Cinder Studios lead developer; Simple Games CEO, Roblox Learn mobile UI/UX roundtable (2023)

BitwiseAndrea
Roblox accessibility engineer, Roblox Learn: designing for accessibility (2023)

Jasmine and Alex
Roblox interactivity product manager; player scripts engineer, Roblox Learn Input Action System Q&A (2026)

Andrea Fletcher, boatbomber and panel
Roblox design systems lead; framework and tool authors, RDC 2024 UI frameworks panel

STATUS

Tests 3 offline checks pass

In app 16 live tests pass in Roblox Studio 0.743 (one on a rerun after a lost reply)
